

Demonstration slides in Beamer with Metropolis

Yournamehere Surnamehere

September 2020

- Repeating all instructions to all students is complicated; total number of instructions is:

$$O(s \cdot i)$$

- Repeating all instructions to all students is complicated; total number of instructions is:

$$\mathcal{O}(s \cdot i)$$

- Solid chance of missing something important
- Correcting the same student errors all over again is boring

Main approach idea

Make example slides → Put them on GitHub

Results so far

The impact is not known, because I am uploading the slides today.

The impact is not known, because I am uploading the slides today.

From the available data (from other similar efforts), we can assume that:

- More than 1 student will download and use the template
- More than 5 minutes of time will be saved.

The impact is not known, because I am uploading the slides today.

From the available data (from other similar efforts), we can assume that:

- More than 1 student will download and use the template
- **More than 5 minutes of time will be saved.** Likely more.

Making the slides

The template is a normal metropolis-themed beamer document.

Main focus:

- Focus on fast dive-in

The template is a normal metropolis-themed beamer document.

Main focus:

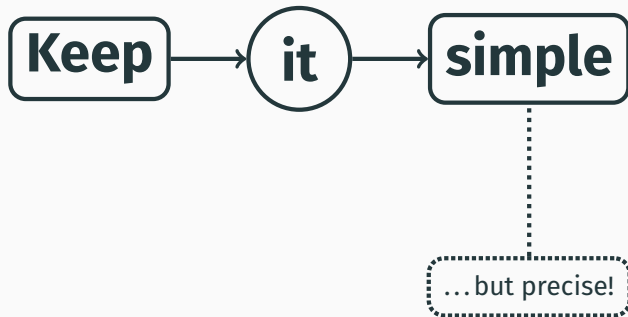

- Focus on fast dive-in
 - Decreases the risk of not getting to the results
 - This is what presentations should look like, right?

The template is a normal metropolis-themed beamer document.

Main focus:

- Focus on fast dive-in
 - Decreases the risk of not getting to the results
 - This is what presentations should look like, right?
- Demo the common beamer tricks (pause, standout, ...)

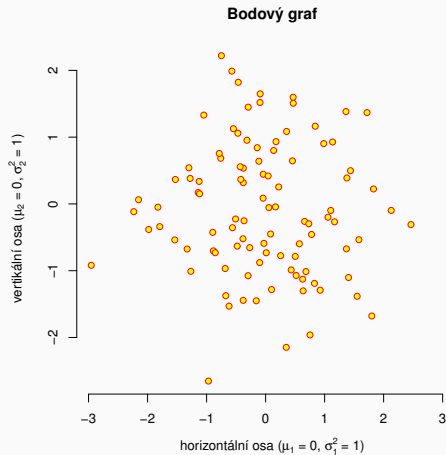

Demo: TikZ diagram

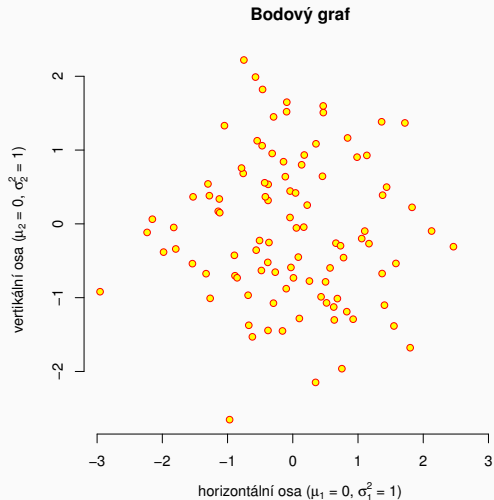

Demo: including formatted source

```
int main() {  
    printf("The answer is: %d\n", 6*7); %actually 6*9  
    return 0; //no chance this didn't succeed  
}
```

Demo: showing a picture with detailed results

Demo: showing something with comments, as in outlook

How we arrived at this?

1. Generated the data
2. Plotted them
3. Used a very fine red marker to circle the points

Thank you for attention!
